

New York Head Mechanics Association For Safe Pupil Transportation

It is with great pleasure, the New York Head Mechanics Association is bringing back the Annual Summer Seminar July 13, 2023 at the OnCenter in Syracuse.

This will be our 31st. Seminar. We will have over 70 vendors to showcase all the new technology and products that are out there to make our jobs easier.

As always, with this seminar the main event is what the New York Head Mechanics Association stands for. That is to improve the safety, efficiency, and economy of School Bus maintenance. For that purpose, we will be holding three training classes this year.

One being a panel of school bus manufactures going over what's coming with the EV buses as far as the timeline for this to happen. What is expected for performance and some information on what to expect at the service end of the EV bus. We believe the time is right to bring everyone up to speed with the current mandate NY is implementing.

Second training is on Cummins engine diagnostics. The Insite computer program and some common component failures and how to diagnose them. There may be some information on the newly released engine platforms Cummins is using as well.

Third, New York State DOT will be updating us on what is new at DOT and changes to the current regulations set forth by NY State.

We hope everyone from Head Mechanics to the mechanic and even Director and Supervisors can come enjoy this day of Training and networking with other schools in NY State

Thank you.

Peter Marini

President New York Head Mechanics Association.
